PREFACE

A GENERAL note on variations in prices of food-grains and salt from 1861 to 1897, with tabular statements showing the area, exports, and condition of different staple crops since 1897-98, has been prefixed to the volume, and the prefatory notes on the retail and wholesale prices of food-grains and staple articles prefixed respectively to Parts I and II of the last issue of the volume have also been modified.

From tables Nos. 1 to 11 the average annual prices of food-grains and salt for eight years, 1861 to 1868, have been omitted, and for them the last issue of the volume should be referred to.

The tables Nos. 12 to 33 of the last issue, shewing the quinquennial averages deduced from the first eleven tables and their variations on the basis of the prices of 1871-75, have been left out from this issue of the volume.

Retail prices are expressed in India generally, and in Part I of this volume, in terms of the number of sers sold for a unit of money, namely, one rupee. To assist in translating this expression into the amount in money paid for a unit of quantity, a table is prefixed to the volume stating the equivalent of "sers per rupee" in "annas per ser" (one anna being the sixteenth part of a rupee). In the next issue the retail prices will be shewn in rupees and decimals of a rupee per maund with the object of comparing them with wholesale prices.

A new table shewing the different weights and measures used in the volume, together with their British and metrical equivalents, has been added at the beginning of this issue.

A case of Kerosene oil contains 65 lbs. = 29.484 kilos = 32 sers
A chest of Opium contains 140 lbs. = 63.504 kilos = 1\frac{3}{4} maunds
```

NOTE

ON VARIATIONS IN PRICES OF FOOD GRAINS AND SALT

Reason for fluctuations in prices in each quinquennium.

A general rise of prices took place about 1860. With the suppression of the Mutiny and the transfer of the administration to the Crown, there commenced a new era of commercial and industrial activity. The resources of the country were developed by the construction of roads and railways, the improvement of harbours, and the extension of irrigation. The cotton famine caused by the American War of Secession (1861—65) gave a great impetus to the cultivation of cotton in India, which, while the war lasted, brought large profits to the cultivator and the merchant. The influx of the precious metals which had begun about the time of the Mutiny was thus further stimulated, and from about the second year of the war a great rise of prices took place throughout the cotton-growing districts of Western and Central India, as also in a smaller degree in other parts of the country. Prices were also raised by the famine of 1861 in the Upper Doab of the province of lAgra and the neighbouring districts of the Panjab and Rajputana and by the scarcity in Cutch.

On the collapse of the inflation caused by the American war, prices would have fallen but for the great famine of 1866 in Orissa, which extended into Bengal proper, Bihar, Madras, and the eastern part of the Central Provinces. Another notable famine—that of 1869—affected Western Rajputana and parts of Northern India, and the extension of scarcity, towards the west and south, produced a rise of prices in Bombay, the Central Provinces, and Hyderabad.

During 1871-75 prices were not seriously disturbed by any calamity except the scarcity in Bihar of 1874, and although large purchases of grain were then made by the Government and scarcity prevailed in the adjoining districts of the United Provinces, the disturbance of prices was not widely felt. The export trade in rice expanded greatly in 1872-73, and was on a large scale throughout the decade 1871-80. It showed greater contraction in 1874, the year of the Bihar famine, than in the Deccan famine three years later.

In this quinquennium occurred the great famine of 1877-78 which affected an enormous tract in Western and Southern India and extended with diminished intensity into the North, causing a general rise of prices of foodgrains all over India. The export trade in wheat, which had begun in a small way after the opening of the Suez Canal in 1870, received a check in the years 1878—1880.

Speaking generally, all crops except rice were good or abundant during these years, though there was scarcity in a portion of the Panjab in 1884 and distress in parts of Bengal and Madras in 1885. The rice crop was bad between 1883 and 1885 owing to drought and floods, but wheat was plentiful, and the average price for all grains was low.

It is difficult to find adequate reasons for the great rise in prices which took place during these five years, for the 1889 famine in Ganjam (accompanied by distress in Orissa and scarcity in Bihar) was only of local importance, and prices had already reached their highest point in 1888. The export trade in food-grains was not larger than in the preceding quinquennium.

The high prices ruling during 1886—90 were still further raised in 1891-92 by prolonged drought, causing scarcity and distress in Madras, Bombay, the Deccan, Bihar, and Upper Burma. A strong Indian demand for rice was coupled with large exports, and at the same time there was an unprecedented exportation of wheat owing to the failure of crops in Europe, so that Indian prices rose almost to famine levels. With better seasons prices fell, but the lowest point reached in 1891—95 was still above the average level of the previous quinquennium, and, as in that period, the importation of silver for coinage continued on a large scale until the closure of the mints in June 1893.

The year 1896-97 was one of intense and widespread famine. The climatic conditions in the autumn were generally most unfavourable, and it was certain by the end of November that famine must supervene over a great extent of the country. It was most severe in the North-West Provinces and Oudh, and in the Central Provinces, where the calamity was seriously aggravated by the fact that in these territories there had been two previous years of short harvest. The winter rains, however, did good to the greater part of Madras, Bengal, Western India, and Rajputana, and also the greater part of the Panjab. The prices of food had been higher than usual in Northern and Central India before the failure of the autumn rains; but they had been moderate in Bengal, Madras, and Bombay up to September 1896. In September 1896 prices rose suddenly and in October famine prices were reached in Northern and Central India, though in Bengal, Madras, and Bombay the highest level was not reached till some months later.

For the years from 1897-98 onwards the chief reasons for the fluctuations in the price of the principal food-grains are given in the tabular statement below.

1897-98.

Madras	Rainfall season-t able and crop fair to good.			Conditions fair to good. Seasonable rainfall.	Rainfall was sea- sonable at sowing time.	Seasonable rainfall and rise in prices induced extended cultivation.
Burma	Rains late and below average. Late rains beneficial. Yield 96 per cent of rormal.				Season fairly favourable.	•••

Generally speaking, the fluctuations in the retail prices of salt are the direct consequence of changes in the duty levied by Government. From 1861 to Retail prices of salt. 1878 there was no change in most provinces. In 1378 the duty was reduced from R3-4-0 a maund in Bengal to R2-14-0, and the duty on Rajputana salt from R3-0-0 to R2-8-0. This change reduced the retail prices of salt in Bengal, the United Provinces, the Panjab, and Assam; but about the same time the duty levied on salt in Sind was raised from Ro-8-0 to R2-8-0 and in Bombay from R1-13-0 to R2-8-0, so that prices rose very largely in Sind and considerably in Bombay. Since 1878 the retail prices of salt all over India except Burma have uniformly responded to changes in duty. In 1882 the rate of duty was reduced generally to R2 per maund which was raised again to R2-8-0 in 1888. The reductions to R2 again in 1903 and to R1-8-0 in 1905 had an immediate effect in bringing down retail prices. The salt tax was reduced with effect from the 20th March 1907 for the third year in succession to Rt a maund throughout the whole of India. In Burma the salt revenue system is somewhat different. In the years 1888, 1889 and 1890 increases in the rates of composition duty were made with a view to raising the incidence of the tax to the same level as in India, and the prices rose considerably in those three years. Since 1890 there has been little change in the retail prices.

PART I

NOTE

RETAIL PRICES OF FOOD GRAINS AND SALT

Prior to 1873 prices of food-grains were officially recorded in different provinces, but the statistics were not collected on any uniform plan, nor brought together in an accessible form.

Under orders of the Government of India issued in 1872 a fortnightly return of retail prices for the commoner food-grains and salt in each district was instituted, and these returns have been regularly published in the Supplement to the Gazette of India since 1873. In 1878 a small volume was published, giving yearly average prices for food-grains for the period 1861—1876 in certain districts which were selected as typical. In 1884 the figures in the earlier volumes were revised, prices for the period 1876—1883 were added, and a new volume was published. Since that date a statement of the average prices of each year beginning from 1861 has been published annually in the volume entitled "Prices and Wages in India". Throughout the period from 1872 additions to the record have been made from time to time by increasing the number of stations from which reports regarding certain grains were required, and also by adding one kind of grain "Kangni" to the list.

The following statement shows the grains for which prices are now recorded in each province and the year from which the record begins:

Jawar Gram Bajra Marua Arhar Salt Rice Wheat Barley Kangni Maize or dái Cholum Cumbu Ragi Kadalai Upper Burma 188g 1887 1887 1887 1892 1887 1887 1887 1861 1861 1861 1861 Lower ,, 1861 τ86**τ** 1872 Eastern Bengal and 1873 1861 1888 1861 1886 1861 Bengal United Provinces 1884 1861 1886 1861 1886 1861 1861 1861 1861 1861 1861 Agra 1872 Oudh ,, ,, 1872 1872 1872 1873 1873 1873 1872 1872 Rajputana 1872 1871 1874 1871 1871 1871 1871 1871 1871 Central India 1886 1861 1861 1861 1886 1861 1861 1861 Paniab and N.-W. Prices are expressed, according to the usual Indian method, in terms of the number of Method of expressing prices in India.

Sers(b) sold for a rupee. It is advisable to note that not only do money prices vary inversely to quantity prices, but that the percentages of the rise or fall of prices according to the two methods of notation are

quite different. Thus if the number of sers obtainable for a rupee is halved, *i.e.*, decreases by 50 per cent, the money price is doubled, *i.e.*, rises cent per cent; but if the grain becomes cheaper, for example, if the quantity of sers sold for a rupee increases by 50 per cent, the corresponding money price is only 33 per cent lower.

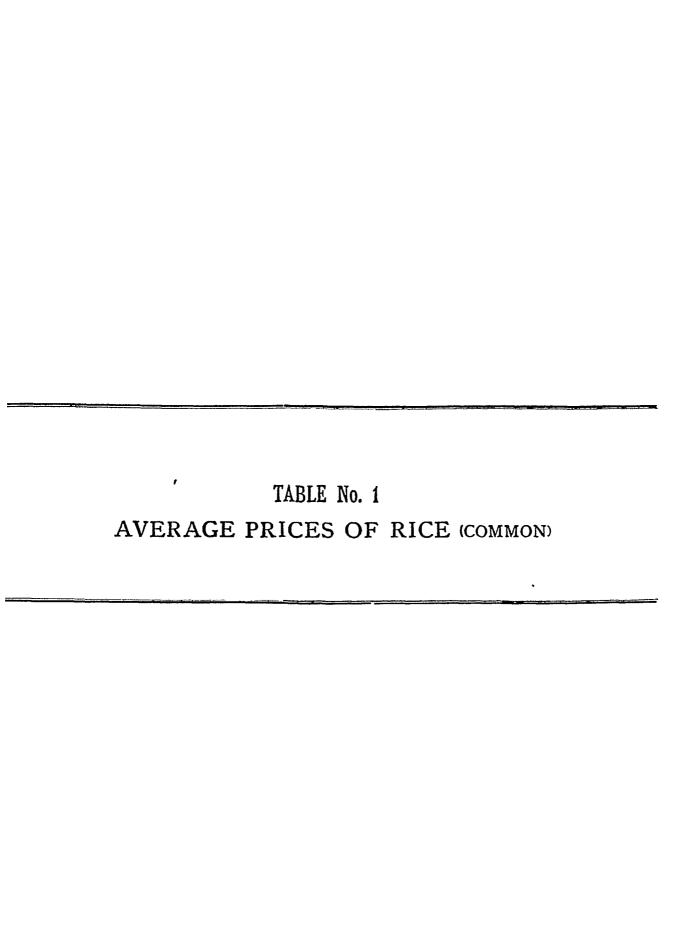

Tables Nos. 1—11 shew the annual average prices of each of the ten commoner kinds of food-grains and of salt. The prices quoted are the averages of the half-monthly prices reported during the year. The districts in each province are grouped together with reference to their climatic character and rainfall, and averages are struck for each group as well as for each province.

Old Tables 12—22 giving average prices for each of the food-grains dealt with in the previous tables and for salt in each quinquennium since 1861 and Tables Nos. 23—33 showing the variations in the quinquennial average prices taking the average prices of the quinquennium 1871—75 as 100 hitherto published in previous issues, have been omitted.

Table No. 12 shews the annual average prices of the most important food-grains at twenty-three stations, which have been selected with a view to giving a fair indication of the general level of prices throughout each province.

Table No. 13 shews the variations of these prices, the prices of the year 1873 being taken as 100. The year 1873 marks the beginning of the great change in the relative value of gold and silver and the character of the seasons was in this year generally normal. These variations represent the relative changes in money prices and are in inverse ratio to the quantity prices.

A note explaining in brief the variations in prices of food-grains and salt since 1861 has been inserted at the beginning of this volume.

PART II

NOTE

WHOLESALE PRICES OF STAPLE ARTICLES OF TRADE AND CONSUMPTION

The tables in this part of the volume contain figures of the wholesale prices of some of the principal staples of the imports and exports, the wholesale prices of food-grains and other articles in Indian markets, and the price paid by the Supply and Transport Corps for articles for the consumption of troops in India.

Table No. 14.—Staple articles of Imports.—The following statement shows the articles for which prices are quoted in this table, the ports from which the prices are obtained, and the year from which the record begins:

								,	•	Calcutta.	Вомвач
							-			•	
Coal		•		•			•		.]		1805

Spelter		•	•			•	•		.	1843	r
Sugar, beet					•			•		1892	***
Mauritius											1870

The average price of bar silver in London as quoted daily by the Bank of Bengal is also given in this table.

The articles, though few in number, represent in their aggregate value a large share of the total import trade. On the average of the last three years the imports of cotton-goods (yarn and manufactures), of metals, and sugar represent 56 per cent of the whole imports into India. In consequence of the development of the Indian coal-fields, foreign coal is no longer a considerable item in the import trade; and the rapid increase in the imports of kerosene oil, which began in about 1888, has been checked by the competition of oil produced in Burma. The prices quoted from 1843—1858 are taken from the Exchange Price Current. From 1859 onwards the quotations are taken for Calcutta from the Price Current and Market Report of

the Bengal Chamber of Commerce. The price of coal at Bombay is taken from the Bombay Market Report, and of gold from the Calcutta Price Current and Money Market Report, and the prices of sugar, Mauritius, and silk are reported monthly by the Commissioner of Customs, Bombay. The prices quoted are those for the first week of January and July in each year, or where quotations are not available for these weeks, for the nearest period.

Table No. 15.—This table shows the variations in the prices quoted in table No. 14, taking the prices of the year 1873 as 100. In the case of articles for which the record of prices began in a year later than 1873, the price of the first year for which quotations are given is taken as 100.

Table No. 16.—Staple articles of Export.—The following statement shows the articles for which prices are quoted, the ports from which the quotations are made, and the dates from which the record begins:

								CALGUTTA	Вомвач	Karachi	MADRAS	RANGOO

Wool			¿	-	•	•	•		100/	•••	,** *	•••

Up to 1858 the prices quoted are taken from the Exchange Price Current. From 1859 onwards the source of the quotations is as follows:

Calcutta: The Price Current and Money Market Report of the Bengal Chamber of Commerce.

Bombay:—Current quotations of the Chamber of Commerce, Bombay Market Report and Trade Journal published in connection with the *Times of India*, the Current quotations of the Millowners' Association for the price of yarn and T. cloth, and a Monthly Report from the Commissioner of Customs for the price of wheat.

Karachi:-Price Current and Market Report of the Karachi Chamber of Commerce.

Madras:-Price Current and Market Report of the Madras Chamber of Commerce.

- Rangoon: -- Monthly Report from the Chief Collector of Customs.

The price of opium is obtained from the Finance Department.

The number of articles in this list is very much larger than the number of articles in the import list, and their aggregate value represents 86 per cent of the total value of exports from India in the last three years.

The prices quoted are those obtaining in the first week of January and July in each year with a few exceptions which are mentioned in foot-notes below the tables.

Table No. 17.—This states the variations of the prices in table No. 16, the price of 1873 (in most cases the price in March) being taken as 100. In the case of articles added to the list after 1873, the price of the first year for which quotations are given is taken as 100.

Tables Nos. 18 and 19.—Comparison of the average prices in India and London of staple trade commodities, and variations in the prices.—Table No. 18 was prepared with figures from 1870 for the consideration of the Royal Commission appointed in 1886 to enquire into the changes in the relative values of gold and silver. It was published for the first time in the volume of Prices and Wages in India in 1890.

In 1898 prices of Burma rice were substituted for prices of Bengal rice. No other change has been made in the form of the table.

The London prices are the annual averages of weekly quotations given in the Economist. The Indian prices quoted are all Calcutta prices except those of cotton and rice. They represent the average of weekly quotations given in the Calcutta Price Current, which is published by the Bengal Chamber of Commerce. The price of cotton is taken from the Current Quotations of the Bombay Chamber of Commerce. The price quoted for Rangoon (Ngatsain and Ngakyouk) rice is the average of the prices reported in a special monthly return which is received from the Chief Collector of Customs, Rangoon.

Tables Nos. 20 to 22.—Average prices in London of sixteen principal staples of trade and of bar silver, and variations.—Table No. 20 was prepared in 1885 for the Royal Commission mentioned above. It was reproduced in the volume of Prices and Wages in India in 1890, with the addition of two descriptions of cotton, namely, (1) Cotton, raw, Dhollera, mid, fair, and (2) cotton, upland, mid, fair.

In 1899 the following additions and alterations were made:

- 1. Coffee (Ceylon) was changed to coffee (East India plantation).
- 2. Indigo (Bengal), Jute, Linseed (Bombay), Rapeseed (Calcutta), Rice (Bengal), Silk (surdah), Cotton—raw (Dhollera), and Shell-lac were omitted—as London prices for all these articles, except shell-lac are shown in table No. 18.
- 3. Coals-Helton Wallsend, Beef-inferior, and Bar Silver were added.
- 4. A new table (table No. 21) shewing variations in the prices in table No. 20 was added.

The following changes in the tables were made in 1900:

- 1. Iron—Scotch pig, flour, leather, and butter were added.
- 2. Another new table (No. 22) shewing variations in the prices measured in silver was added.

The prices in table No. 20 are the annual averages of prices reported in the monthly Trade Supprlement to the Economist.

The system on which table No. 22 is compiled is fully explained in a foot-note printed below the table.

Table No. 23.—Annual wholesale prices of food-grains and other articles.—Since 1897 wholesale prices of food-grains and certain other articles have been reported for selected marts in each province of India under orders issued by the Government of India in 1896. The following is a list of the articles for which fortnightly wholesale prices are reported, and the provinces from which reports are received. The number shown under each province indicates the number of marts in that province from which wholesale prices for the article in question are reported.

The prices are those governing actual wholesale transactions on the last day of each fortnight, and unless wholesale transactions have actually taken place, no prices are quoted. The definition adopted for a "wholesale transaction" is one in which not less than 10 maunds of food-grains, seeds, grass and straw, and one maund of other articles, such as turmeric, tobacco, etc., change hands. In the case of live-stock, prices are quoted for a score of sheep and for a pair of bullocks. The prices are only quoted for those marts where the article in question is a staple of local trade. The total number of articles for which wholesale prices are reported, as given in the list above, is 45, and there are 95 separate marts from which reports are received. Prices for 24 of these articles are published in the Supplement to the Gasette of India each fortnight. Table No. 23 contains prices for the following 23 articles:

Rice (husked)	Gram or Kadalai	Sugar, refined
Wheat	Arhar dál	Cotton
Flour (wheat)	Linseed	Jute
Barley	Mustard and rapeseed	Tobacco leaf
Jawar '	Poppy seed	Termeric
Bajra	Sesamum (til or jinjili)	Sheep
Ragi	Ghi ·	Plough bullocks
Maize 、	Sugar, raw (gur)	

The prices given are the simple average of the half-monthly prices quoted from each reporting district.

Tables Nos. 24 and 25.—Wholesale prices of certain staple articles in Calcutta, and variations.—A special statement of the prices of certain staple articles in Calcutta was obtained in 1885 in connection with enquiries into the fluctuations in prices. It was incorporated in the 10th issue of Prices and Wages in India in 1893. No change has been made in the form of the table except that the prices of 2nd and 3rd class bricks, which were quoted up to 1901, have been omitted since that year. The sources from which prices for this table are taken, are stated in the note prefixed to the table.

Tables Nos. 26 and 27.—Annual average prices per 100 lb. paid by the Supply and Transport Corps, Northern and Eastern Commands, for articles for consumption by troops, and variations.—These statistics were first prepared in 1885 in connection with the enquiry into the fluctuations in prices. They were incorporated in the tenth issue of the volume of Prices and Wages (1895) together with a table of variations. These tables have continued unaltered up to the present date.

A note explaining in brief the variations in prices of food-grains and salt since 1861 has been inserted at the beginning of this volume.

Note.—In this table, the variations in the prices of gold (measured in silver) are arrived at by multiplying the price of bar silver in London in 1873.

(=59\frac{1}{24}d.) by 100 and dividing the product by the price of bar silver in the particular year.

Example—
Price of silver in 1899=27703d. (table No. 20); price of silver in 1873=5934d.; price of gold in 1873=100. The variation in the price of gold in 1899 is then worked out thus—
27703:5934::100: 215

The variations in the prices of the other articles in this table are calculated thus: As the variation in the price of gold in table No. 21 is to the variation in the price of gold in this table, so is the variation in the price of the article in table No. 21 to the variation required

Examble—

Variation in the price of gold in table No. 21 = 100; variation in the price of gold (measured in silver) in 1899, in this table = 215

variation in the price of copper (measured in gold) in 1899=86 (table No. 21). Therefore

100: 215:: 86: 185

No. 23—AVERAGE ANNUAL WHOLESALE PRICES of FOOD-GRAINS and OTHER ARTICLES—(Prices are stated in rupees and decimals of a rupee per ten maunds for all articles except Live-Stock)

PART III

WAGES

NOTE

The statistics of wages presented in table 28, and its subsidiary tables 29 and 30, are compiled from half-yearly returns purporting to show for each district the average for the preceding six months of the wages per month of certain labourers and artizans. the most important class of labour is agricultural, and the record obtained entirely fails to give a reliable indication of the remuneration of the labourers. This result is due to the inherent difficulties of the problem, and the practical impossibility of getting the untrained reporting agency to make the necessary allowances for the varying conditions of employment. Payment in kind is commonly practised, either for the entire wage, or as a supplement to cash wages, and the supplements vary according to the season and the nature of the employment. The regularity of employment also varies greatly, and employment is practically nowhere continuous throughout the year. The most common expedient for avoiding these, and other difficulties, is to return cash wages for labourers employed in towns or their neighbourhood, which are in no way typical of the rates prevailing throughout the district. The same difficulties are also encountered in collecting information as to the wages earned by village artizans, and the results are further vitiated by assuming that masons, carpenters, and blacksmiths necessarily earn the same wages. The wages of horsekeepers are recorded with the least inaccuracy, but even if they are taken as typical of the wages of domestic service generally, the class represented is unimportant.

The selection of the districts, for which figures are published in the tables, is also faulty, as the districts are not typical of tracts having similar economic conditions, but are those originally selected according to their climatic character and rainfall for making returns of the prices of food-grains.

Measures are now being taken to replace the present faulty returns by more scientific methods of investigation, whose object will be to ascertain the standard rates of wages in each district or homogeneous tract, and to observe permanent changes in those standard rates as distinct from short period fluctuations.

Tables Nos. 31 and 32 are a record of wages paid in certain State Railways and Government Establishments as well as in some Industrial Establishments in various parts of the country.

The figures in tables Nos. 28, 29 and 30 are compiled from the half-yearly reports received from District Officers. The figures in table No. 31 are reported annually by the Director General of Post Office, the Railway Board, the Irrigation Department of the Government of Bengal, and the Accountant General, Military Department; and those in table No. 32 are supplied by the owners or managers of the different industrial concerns.

(11)-Monthly wages (in Rs) in another Mill in Northern India

(a) Unskilled labour (in one of the Departments)

			Rate of Wage				Rate of Wage				Rate of Wage
1877 . 1878 . 1879 . 1880 . 1881 . 1882 . 1883 . 1884 . 1885 .	•	 •	4.75 4.11 4.26 4.2 4.54 4.7 4.94 4.82 4.92 5.21	1887 1888 1889 1890 1891 1892 1893 1894 1895 1896	 	 	5°18 5°14 5°2 5°25 5°64 4°87 4°87 4°87 4°87	1897 1898 1899 1900 1901 1902 1903 1904 1905 1906	 	•	4*87 4*87 5*69 5*69 5*69 6*09 6*09 6*09

The manager of the mill explains:

[&]quot;The rate for 1877 appears to be abnormal, probably because there were few employes and the mill had only recently started. If the wages of one or two men more highly paid than the others be left out, the rate is R4-3."

(11) - Monthly wages (in Rs) in another (b) Skilled labour (in January of each year)
